

Pedometrics goes to the Tropics (at last)

Pedometrics is the application of mathematical and statistical methods for the study of the distribution and genesis of soils.

CALL FOR PAPERS!!
Pedometrics 2013
Nairobi, Kenya
26-31 August 2013
www.pedometrics.org/2013
pedometrics2013@gmail.com

Abstract deadline: December 15, 2012

Notification of Acceptance: February 1, 2013

Student scholarships available! Apply online!

Conference themes

Latest developments in pedometric methods and application of mathematical and statistical methods in the study of the distribution and genesis of soils.

Conference objectives

To showcase innovative research on the mathematical spatial and temporal modeling of soil through interactive discussions and technical sessions.

To promote international interaction as well as student participation around emerging pedometric techniques, with specific examples from the tropics.

To encourage the recognition of the results from pedometric analyses on informing planning and management decisions and public policy.

Conference activities

Pre-conference spatial data analysis workshops (2 days); oral and poster sessions; field trip to the Laikipia region of central Kenya; predictions competitions, tour of ICRAF Soil-Plant Spectroscopy Laboratory; a week of interactive sessions and discussions!!
